    driver.get("http://police.uk")

    # Wait for 5 seconds to see the page
    time.sleep(5)

    # Optionally, interact with the website
    # For example, search for 'Selenium' in Wikipedia
    # search_box = driver.find_element_by_name('q')
    # search_box.send_keys('Selenium')
    # search_box.send_keys(Keys.RETURN)
    # time.sleep(5)

    print("Selenium is working fine!")
except Exception as e:
    print(f"An error occurred: {e}")
finally:
    # Close the browser
    driver.quit()
```

```
Selenium is working fine!
```

Having established that Selenium is capable of accessing the police.uk website, let's start building an ethical bot! Firstly, we accessed the https://police.uk/robots.txt (https://police.uk/robots.txt) page and found certain URLs needed to be disallowed. I decided to start by caching the robots.txt file so that my bot could refer to it without sending repeated requests to the site. My bot would then check URLs against those contained in the robot.txt file and would return a "robot.txt error" rather than crawl the forbidden URL:

In [19]: ▶

```python
from urllib.robotparser import RobotFileParser
from urllib.parse import urlparse

def can_crawl(url):
    """
    Check if the crawler can crawl a given URL based on the site's robots.txt.
    """
    parsed_url = urlparse(url)
    robots_url = f"{parsed_url.scheme}://{parsed_url.netloc}/robots.txt"

    rp = RobotFileParser()
    rp.set_url(robots_url)
    rp.read()

    return rp.can_fetch("FriendlyUniStudentResearcher", url)

def crawl(url):
    """
    Attempt to crawl a URL, respecting robots.txt rules.
    """
    if can_crawl(url):
        try:
            response = requests.get(url)
            # Process the response here (e.g., parse HTML, follow links, etc.)
            print(f"Successfully crawled: {url}")
        except Exception as e:
            print(f"An error occurred while crawling {url}: {e}")
    else:
        print(f"robots.txt error: Crawling not allowed for {url}")

# Example usage
urls_to_crawl = [
    "http://police.uk/mediacentre",
    "http://police.uk/?u=media",
    "http://police.uk"
    # Add other URLs you're interested in
]

for url in urls_to_crawl:
    crawl(url)
```

```
robots.txt error: Crawling not allowed for http://police.uk/mediacentre (http://
police.uk/mediacentre)
robots.txt error: Crawling not allowed for http://police.uk/?u=media (http://pol
ice.uk/?u=media)
robots.txt error: Crawling not allowed for http://police.uk (http://police.uk)
```

It is customary to include a specific "user-agent" to identify your bot and make it possible for website administrators to contact you with concerns:

In [ ]: ▶

```python
session = requests.Session()

# Set the custom user-agent for all requests made with this session
session.headers.update({
    'User-Agent': "FriendlyUniStudentResearcher/1.0 (+mailto:soc204@exeter.ac.uk)"
})
response = session.get()
```

In [7]:

```python
import requests
import json

# Define your custom user-agent string
user_agent = "FriendlyUniStudentResearcher/1.0 (+mailto:soc204@exeter.ac.uk)"

# Set the headers for your request to include your custom user-agent
headers = {
    'User-Agent': user_agent
}

# The URL for testing headers (httpbin.org is useful for HTTP requests testing)
test_url = "https://httpbin.org/headers"

# Make the request with your headers
response = requests.get(test_url, headers=headers)

# Parse the JSON response
response_json = response.json()

# Extract and print the User-Agent header from the response
print("User-Agent received by httpbin.org:")
print(response_json['headers']['User-Agent'])
```

```
User-Agent received by httpbin.org:
FriendlyUniStudentResearcher/1.0 (+mailto:soc204@exeter.ac.uk)
```

In [ ]:

```python
from selenium import webdriver
from selenium.webdriver.chrome.service import Service
from selenium.webdriver.common.keys import Keys
import time
from selenium.webdriver.chrome.options import Options

options = Options()
user_agent = "FriendlyUniStudentResearcher/1.0 (+mailto:soc204@exeter.ac.uk)"
options.add_argument(f'user-agent={user_agent}')
# Specify the path to chromedriver if it's not in your PATH
chromedriver_path = r"C:\Users\socor\Downloads\chromedriver-win64\chromedriver-win

# Initialize the WebDriver (assuming Chrome)
service = Service(executable_path=chromedriver_path)
driver = webdriver.Chrome(service=service)

session = requests.Session()

# Set the custom user-agent for all requests made with this session
session.headers.update({
    'User-Agent': "FriendlyUniStudentResearcher/1.0 (+mailto:soc204@exeter.ac.uk)'
})
response = session.get()

driver.quit()
```

In [22]:

What follows is the webscraping script- remember to recreate this script's output, you must have first downloaded the relevant chromedriver for your machine from https://googlechromelabs.github.io/chrome-for-testing/#stable (https://googlechromelabs.github.io/chrome-for-testing/#stable), and provide the path to your own version of the chromedriver where prompted in the script. You may also wish to use your own user-agent. It is recommended that your user-agent contains a (+mailto:emailaddress) string so that any crawling of the bot that raises concerns with the service provider can be mediated by them reaching out to you.

In [10]:

```python

# Data Cleaning

The webpage states that data is not available for "City of London Police" force
area, so we'll add that force area manually. Similarly, most of the desired data was
unavailable for the aggregate "Total England & Wales", so we need to add empty
dictionaries to represent missing values in our data for those two "force areas".

In [20]: ▶| `Force_Areas.append("City of London Police")`

We need to store that data in a pandas series to unlock better functionality. The idea is to get force area
level data on financial reserves over the period since records begin and average crime rate for each
force area last year.

In [97]:

```python
import pandas as pd
import numpy as np
Force_Area = pd.Index(Force_Areas)
force_avg_crime_rate = {}
for area in Force_Areas:
    if area in jurisdictions:
        if jurisdictions[area] == {}:
            force_avg_crime_rate[area]=np.nan
            continue
        force_avg_crime_rate[area]=jurisdictions[area]['Force average']
    else:
        force_avg_crime_rate[area]=np.nan
Force_Crime_Rates = pd.Series(force_avg_crime_rate,name='Average Crime Rate')
force_jurisdictions = {}
for area in Force_Areas:

We also want a dataframe that combines jurisdictions with their crime rates (excluding force area averages) so that we can see the worst 5 jurisdictions for crime rate and top 5 jurisdictions for crime rate. From that we need a dataframe linking each jurisdiction a force area so that we can identify which force areas have the most success and whether reserve resources are an effective predictor of reduced crime rate.
